**Project title:** *Gift Registry*
Group members: **Kevin Whalen, Kyle Meehan, Vidmantas Steponavicius**
System compatibility: Android 2.3 and above.

Thank you for being interested in Gift-Registry. So lets start with description of what it is:

      The Gift Registry is meant to be a store independent way of simplifying gift giving and receiving. The main advantage of having a personal registry like this is being able to add items any time or place via internet. System is currently designed to work well only with **USA standards**. Expect more useful and cool functionality in the future.

      It also makes gift giving a less complicated process. Gift givers do not have to pull their hair then they are trying to come up with best gift ideas on their own. Does sound like something that might be useful for you? If it is read this user manual in order to be able experience Gift-Registry at its most.

Welcome page

      First page that welcomes you is giving you options for possible next steps. You have to LogIn to your account or create a new one. Simply input your existing user name and password if you are existing user, or click on "New User" button to register. But before you do that let me explain about other buttons on the page. On very top we see page header which says "Gift-Registry" on it. This header is a link which will take you back to your home screen at all the times when you are logged in (if you do not know what home screen looks like yet, take a peek at section **Home screen**).

      Moving along, on the bottom you see page footer which has three buttons: "Help", "Contact Us" and "About Us".

      Something tells me that you probably reading this manual after you pressed "**Help**" button:).

      "**Contact Us**" button will let you know the ways you can contact our customer support team if you ever need it.

      And finally "**About Us**" button will let you find out about our company.

LogIn page

In case you are new to Gift-Registry you will have to create your   account in order to be able to use it.

This should be a piece of cake for you. In first section type in your first name, middle name, and last name. Date Of birth in following format YYYY-MM-DD. Where YYYY stands for year integers, MM – month and DD – day of the month. **Note** not forget to pu dashes between numbers. For example: 1999-12-25.

In address section you can pick from locations menu: Home, Work, School or other location name. Next fill out street number, street name, and extension (apt, unit and etc.). Following by city name, state and zip code.

In User information part create your unique user name and choose strong password. Repeat password just in case you made a mistake typing it in first time.

All done, press submit and you are all set to enjoy Gift-Registry.

Home screen

This is the main screen of Gift-Registry. You can always come back to it by pressing on the top of the screen where it says "Gift-Registry".

So you have four main options: you can see what events are coming up by pressing "Future events" button, as well as see to which events you are currently invited by pressing on "Events I am invited to". "Past events" will take you to the events that you have previously put together. And finally "Create a new event" does exactly what it says, lets you create your own event and start inviting your friends and relatives to it as well adding those perfect gifts to your list.

Create a new event

This screen will allow you create your own events by filling out information about such as location, who is going to be invited and then start listing those perfect gifts.

First start from naming your event, like graduation, wedding, birthday or something else. Then date it, make sure to use correct format YYYY-MM-DD and do not forget to put dashes in between of numbers ("-").

In address section choose from options: Home, Work, School or Other location title. Next fill out street number, street name, and extension (apt, unit and etc.). Following by city name, state and zip code.

In the section called list of guests to invite fill out first and last names of your guests and use their email address or just type in your invited persons Gift-Registry user name. Then press add, this will add this person to your invited list. You can add as many people as you want, there is no limit.

And now the best part! Press "Scan item" button in order to activate bar-code scanner and start adding those gifts to the list.

Once you had enough of this fun click "Create this event!". It will save your event to database. Do not worry you can comeback any time before the date of the event to add more guests or gifts to the list.
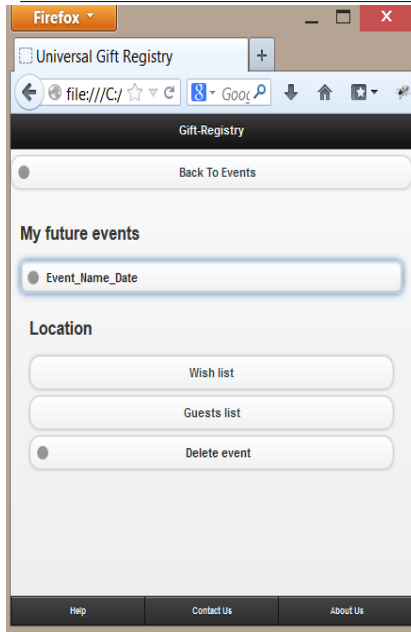

Past events

Past events screen which can be reached from "Home screen" page will display events that you have hosted in the past. You can see event title and date when it was hosted, along with location information. You can also click on either "Wish list" or "Guests list" buttons to see what you have wished for and who was invited to that event.
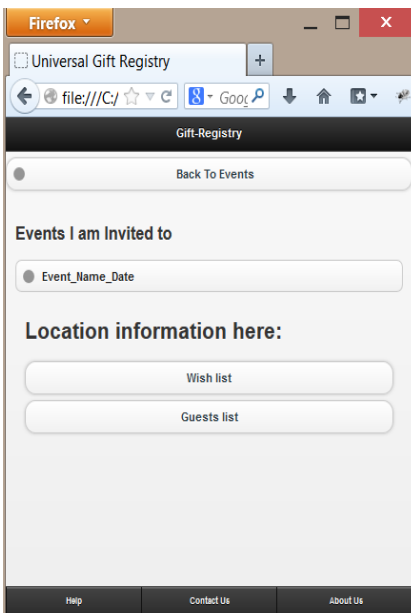

And finally you can delete this events information from your history. All though we recommend keeping it for sentimental or just statistical value. For most people it is truly interesting to go back and recall what did they wish for in the past, many it was long forgotten birthday, or just party where they got best gifts and had best friends.
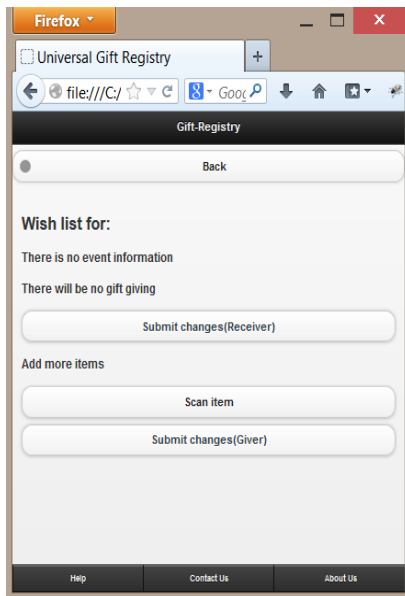

Future events

Here you have information on upcoming events. You can see event title and date when it was hosted also location address. By clicking on "Wish list" you can manage your gift list for this event. Clicking on "Guests list" button gives you ability to manage who is invited to that event.

And finally you can delete this event in case you had emergency and it is impossible to have it any more. This should be used in case of emergencies only because it is extremely unethical to cancel events. System will notify all your guests about event cancellation, but again hopefully you will never have to use this button.
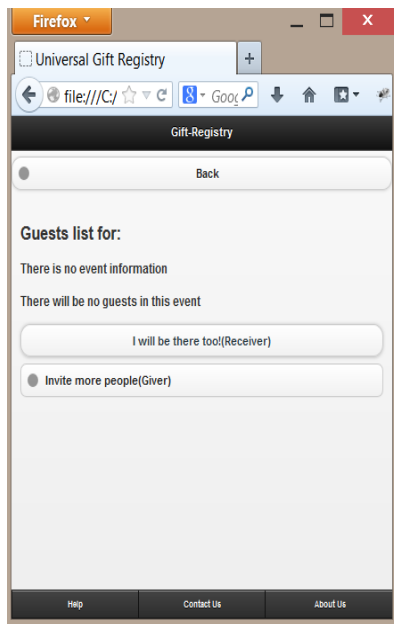

Events I am invited to

This screen lets you see future events that you are currently invited to and see hosts event title with date of the event. Also list of items that are desired by him/her. Do not forget to check out list of guests as well and let host know if you are coming or not.

Wish list

Wish list will look slightly different depending on if you are person who is a guest to the event or the person who is hosting it. Also it is slightly different depending on the date of viewing.

Let me explain by example: if you are person who is a guest to the   party you can choose which gifts you will buy and nothing else. As well if event past there is nothing to do but see results. But on the other hand if you are the host and party is still in the future you might want to add some more gifts. That is when "Scan item" and "Submit changes" comes in to the rescue!

Guests list

Similarly to "Wish list", "Guests list" is slightly different depending on user who is viewing it. When looking at past events by hosts information can only be viewed(if you want to delete the list you will have to delete all event data, go back). For guests screen does not display ability to modify any information. All though guests can confirm that they are coming to the event.

If event is the future and person who is viewing it is inviting he/she has ability to add more people to the list. But do not see "I will be there too!" button.

Summary

Basically all you need to remember is that it is the best to manage your events from "Home screen" page. It lets you to browse through past, future and events that you are invited to as well as create new events. From event screens you are able to see their details as well as make changes.

Thank you for choosing Gift-Registry and have a great day!
