Project: Gift Registry

Installation Manual

Requirements:

- HTTP web server

- PHP 5.3.3 or newer

- MySQL 5.1.67 using utf-8

- download gift-registry.zip

Installation:

- unzip gift-registry.zip

- Source dataDefinitionSchema.sql via favorite database manager (mysql in the command line or phpmyadmin.php work great) into the database to setup the appropriate tables.

- Source: setTableEngines.sql to change table types from default to InnoDB.

- Source: indexStatements.sql to set table indices. These can be manipulated based on own performance needs.

- Source: applyForeignKeys.sql to set foreign keys accross tables.

- *Optional step:*

    - Source: insertDummyData.sql to give the tables sample data.

- Copy the mobile_website files to the web server

    - / HTML and PHP files

    - styles/ CSS files

    - images/ icons and such

    - scripts/ JS and PHP files

- Point android browser at hosted domain to use the website with the barcode scanner. Otherwise any browser can be used to interact with the rest of the site.
